

# MediaWiki:Api-format-prettyprint-header

[Jump to navigation](#) [Jump to search](#)

This is the HTML representation of the \$1 format. HTML is good for debugging, but is unsuitable for application use.

Specify the *format* parameter to change the output format. To see the non-HTML representation of the \$1 format, set `format=$2`.

See the [complete documentation](#), or the [API help](#) for more information.
