

MediaWiki:Api-help-authmanager-general-usage

[Jump to navigation](#) [Jump to search](#)

The general procedure to use this module is:

1. Fetch the fields available from `action=query&meta=authmanagerinfo` with `amirequestsfor=$4`, and a \$5 token from `action=query&meta=tokens`.
2. Present the fields to the user, and obtain their submission.
3. Post to this module, supplying *\$1returnurl* and any relevant fields.
4. Check the status in the response.

If you received PASS or FAIL, you're done. The operation either succeeded or it didn't.

If you received UI, present the new fields to the user and obtain their submission. Then post to this module with *\$1continue* and the relevant fields set, and repeat step 4.

If you received REDIRECT, direct the user to the `redirecttarget` and wait for the return to *\$1returnurl*. Then post to this module with *\$1continue* and any fields passed to the return URL, and repeat step 4.

If you received RESTART, that means the authentication worked but we don't have a linked user account. You might treat this as UI or as FAIL.
